Eurostar™ 24V MR-16

24V Dichroic MR-16 Lamps for General Lighting

Eurostar™ 24 volt series of Halogen MR-16 lamps provide professional grade lighting. The UV protected Halogen capsule is aligned within a Titanium Oxide coated reflector. The hard Titanium Oxide surface of the reflector provides consistent color throughout the life of the lamp.

The 24 volts systems use half the current (amperage) than 12 volt systems. This allows higher wattage loads and up to twice as many as lamps on a longer lighting system. The 24 volt systems are less prone to voltage drop over longer wires and connections which results in more consistent brightness and color.

This product is included in the USHIO Designer's Collection pack. [Click here for more information.](#)

FEATURES & BENEFITS	APPLICATIONS	SPECIFICATIONS
--------------------------------	---------------------	-----------------------

FEATURES & BENEFITS

- Dimmable
- Crisp white Halogen light
- UV-cut Halogen capsule
- Base type GU5.3
- Titanium Oxide hard coating provides consistent color over the life of the lamp
- 50% less current than 12 volt systems
- Less voltage drop over long lines
- Universal Burn Position
