Footnotes

- State of the Art SPL Optics
- Infrared lamp technology
- To avoid electric shock and/or skin burns, turn off power and allow bulb to cool before handling or attempting replacement.
- @ 120 volts, approximate 44 watts, 850 lumens, 6000 hours.
- In base up operation, heat may eventually deteriorate paper-lined or plastic sockets.
- Approximate life for 130 volt tungsten halogen lamps operated at 120 volts is within the value calculated using the recommended equations for standard incandescent lamps, as set forth in the IES Handbook, 8th edition. Because of the uncertain nature of the halogen cycle on the coil when operated at less than rated voltage, life of tungsten halogen lamps varies considerably and unpredictably. OSRAM SYLVANIA does not recommend operation at other than rated voltage.
