

Coco A & B Directions of Use

A ready to use fertilizer solution is made by diluting A & B concentrates in equal amounts with tap water.

- Shake Coco A and Coco B well before use
- Fill the nutrition tank with water
- Dosage: 40 ml / 10 Liter - 15 ml / US gallon (1:250)
- Stir well and let mixture stand for some hours
- Recommended pH: 5.5 - 6.2
- Recommended EC for Coco A + B is 0.8 - 1.8 mS/cm (Part A plus Part B and assuming source water at 0.0 EC)
- Water gift: 3 - 6 liter / m2 / day (for full grown plants)
- Plants best catch roots in the Coco medium when it is not too wet

Other directions

- Never mix the A-concentrate directly with the B-concentrate, as insoluble combinations will occur
- Keep out of reach of children
- Store in a dark place
- Keep away from extremes of hot and cold
- Over fertilization has a negative effect on the nutrient mix and plant quality
- Not to be used in protected nature reserves, reed beds or swampy areas, in hedges or small woods, in bodies of surface waters or near groundwater collecting areas
- If the solution comes in contact with the skin or eyes, rinse with water
