

Aqua Flores Directions of Use

Professional hydroponic food for re-circulating water systems. A ready to use fertilizer solution is made by diluting A&B concentrates in equal amounts with tap water.

- Shake Aqua Flores A and Aqua Flores B well before use
- Dosage: 30 ml / 10 Liter - 11 ml / US gallon (1:333)
- Stir well and let mixture stand for some hours
- Recommended pH: 5.2 - 6.2
- Recommended EC for Aqua Flores A + B is 1.2 - 1.5 mS/cm (Part A plus Part B and assuming source water at 0.0 EC)

Other directions

- Never mix the A-concentrate directly with the B-concentrate, as insoluble combinations will occur
- Keep out of reach of children
- Store in a dark place
- Keep away from extremes of hot and cold
- Over fertilization has a negative effect on the nutrient mix and plant quality
- Not to be used in protected nature reserves, reed beds or waters or near groundwater collecting areas
- If the solution comes in contact with the skin or eyes, rinse with water
