

1. Position stakes on ground, using light string as spacing guide. Make a starter hole with a screwdriver or similar tool.

2. Push tab down into position.

3. Install stakes by pushing pointed end into starter hole.

4. Install C-7 or C-9 lights by snapping them into clip.

Install mini lights by crossing one side of clip over the other, as shown, so that notches overlap, then squeeze sides of clip together and insert mini light.
