	12	12 hrs		2 tsp » gal	1 Tbl » gal			¼ - ½ tsp » gal

FEED WITH EVERY OTHER WATERING

SOIL & SOILESS FEEDING TIPS: • Use FoxFarm Ocean Forest® Potting Soil when transplanting seedlings into larger containers. • For best results feed with every other watering. • During the flowering stage reduce the amount of light from 18 hours to 12 hours. • Maintain a pH of 6.3 to 6.8 to prevent nutrient lock up and reduce stress on plants. • Use primary nutrients for abundant growth and stocky, robust plants. • For high-octane yields add supplements to the weekly diet. • Never mix pure concentrates together, always add them to water first.

Use FoxFarm Big Bloom™ in conjunction with other FoxFarm nutrients to relieve plant stress, unlock unwanted salt bonds and allow for increased nutritional flow. Note: In Coco this process is especially helpful, as Coco has a tendency to retain mineral salt build-up.

For longer grow cycles, continue the week 12 feeding schedule until harvest.
