

METAL LAMP CORD SUPPORT CLIP

The wire clip included in this hardware support bag is an enhancement suitable for all ballasts sold by Hydrofarm. This support clip is to be used to lock your lamp cord connection in place, protecting the ballast from being unplugged when kicked or moved. It is a single piece of metal wire with two open-ended prongs (*Figure 1*).

ATTACHING THE CLIP

1. Remove the support clip from its packaging.
2. Unplug the power supply cord from the ballast.
3. Spread the two metal prongs apart so they fit over the holes on either side of the dual lamp receptacle plug. The holes are in the grooved portions of either side of the reflector lamp cord head. It may be helpful to move the piece of black plastic blocking the outlet not in use (*Figure 2*).
4. Press the metal prongs into the holes to secure the clip (*Figure 3*).
5. Plug the reflector lamp cord into the proper receptacle.
6. Pull the lamp cord support clip towards the lamp receptacle so it is aligned with the power cord (*Figure 4*).
7. Press the support clip over the lamp cord head to secure the connection.
8. Plug the power supply back into the ballast.
