1 Identify and organize parts.

All models have similar parts to those shown below. Lay out all parts in groups, allowing plenty of space for assembly.

- A** Vent Cover(s)
- B** Tray Liner
- C** Corner Connectors
- D** End Clips
- E** Pole Connectors
- F** Pole Sections
- G** Tent Body

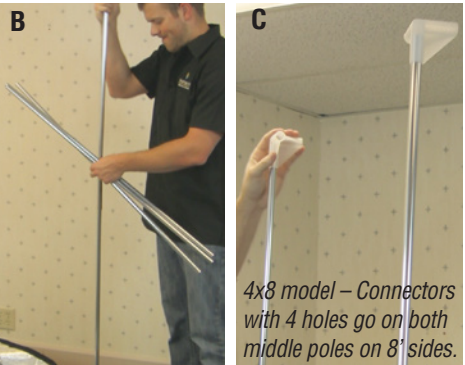

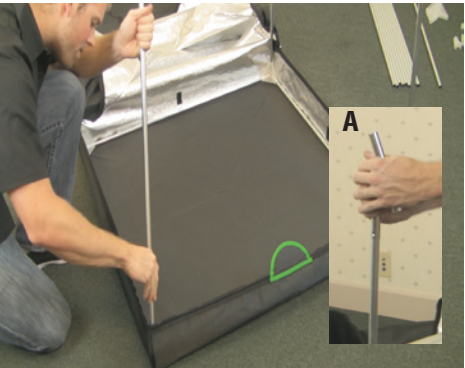

2 Start at the bottom.

Roll out tent body and bottom tray on floor. Assemble bottom pole sections and corner connectors inside the bottom tray.

3 Assemble vertical poles.

Insert pole sections into bottom corner connectors. Use pole connectors as needed to build vertical pole sections (A & B). Place corner connectors at the very top of each vertical pole (C).*

4x8 model – Connectors with 4 holes go on both middle poles on 8' sides.

4 Connect roof frame.

Insert pole sections between top corner connectors.* Make sure pole sections are inserted all the way into connectors.

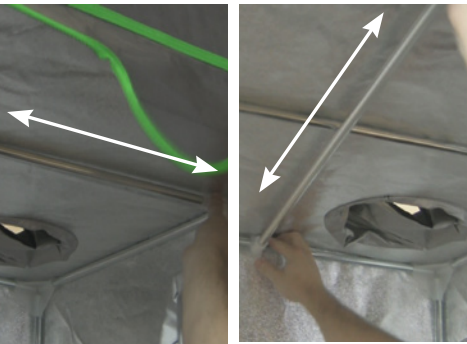

5 Work tent body over frame.

Raise roof of tent body and gently work over top of frame. *NOTE: 2 people are required for 4x8 model assembly.*

6 Install extra supports.

Attach end clips to remaining pole sections. Install in roof as desired for your model, depending on where you plan to install support for lights, fans, etc.

7 Install liner and cover(s).

Fold out tray liner in bottom tray and smooth flat, making sure it reaches all corners. Secure vent cover(s) over vents if desired.

8 Start growing!

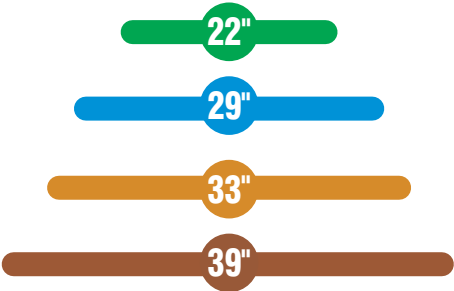

Smooth out any remaining folds and wrinkles. Check all zippers to make sure they work smoothly. **START GROWING!**

**Refer to Frame Diagrams on reverse for pole positioning on your particular model.*

FRAME DIAGRAMS

Pole Lengths

NOTE: "Extra" pole sections are for additional roof support and for hanging hardware. Attach end clips and hang from frame (see Step #6 on reverse side).
