

We have a few ideas that will make it a lot easier in your quest to rid your plants of bugs.

First, get rid of leaves that are less than healthy (leaves that are curled, dried out, yellowing in color). DO NOT pull leaves off and throw them on the ground – you have to remove the leaves from the area.

Second, if you can control the temperature, cool the room and keep it as close to 65 degrees as possible, 24hrs a day (until you have the infestation under control). It will slow the growth of bugs.

Third, completely saturate the foliage (until dripping). You need to hit every surface of the plant. If you miss a bug or egg, you still have them. Let me say it again... if you miss a bug, you will still have them!!! Use your hands to move leaves and branches while spraying.

Lastly, be sure to clean up between plants and before you, your dog, or anyone else enters the grow room. Do not cross contaminate other plants.

Keep It Green, Keep It Clean.

To be successful with Spider Mites you have to work at it!!!

GreenCleaner

Green Cleaner is a concentrate.

2oz bottle makes 1-4 gallons of solution.

4oz bottle makes 2-8 gallons

Can be used during any stage of plant development, from cuttings through harvest.

No protective gear needed, Green Cleaner is all natural.

Annihilates Spider Mites & their Eggs.

Washes off dead bugs, left over fertilizer, and Powdery Mildew.

Can be used on Powdery Mildew the day of harvest!

KILLS BROAD MITES

Unlike other products, Spider Mites do not get immune to Green Cleaner.

Spray Green Cleaner on plants of every age, from clones through harvest, as follows:

Per US Gallon Of Water

Initial Application2oz / gal

Secondary Applications 1oz / gal (apply every 1-2 days)

Powdery Mildew½ - 1oz / gal

Maintenance.....½ - 1oz / gal

Directions:

Shake Green Cleaner before measuring and again after adding to water. Shake every few minutes while spraying. If applying in late flower (last 2-3 weeks), remember that it is better to spray a light mix more often. Green Cleaner will kill every mite you spray it on. I don't know if you've heard, but there is nothing on the market that will kill 100% of mites in late flowering! You can't spray the inner flower. You can however, keep them under control!

Final Statement:

With Spider Mites, you need to kill them before flowering or in early flowering. Every plant brought into the grow room should be quarantined and deemed clean before entering.

It is important that Green Cleaner is mixed well before measuring to make the spray. When adding to water, mix again, and shake spray device every few minutes to keep it mixed. We use a pressurized type sprayer (Hudson type) set to the finest spray possible. Great for use in Atomizers.

Indoors – Apply when main lights are off in the grow room. Let plants dry well before lights are turned back on.

Outdoors – Spray in early morning.

Kills Mites and their Eggs.
Washes Powdery Mildew right off the plant.
All Natural you can even use Green Cleaner to wash your hands.
No need for protective gear.
Use the Day of Harvest.

8oz bottle makes 4 – 16 gallons.
32oz bottle makes 16-64 gallons solution.
128oz bottle makes 64-256 gallons.

Active ingredients:

Corn Oil (Non GMO) 15%

Soybean Oil (Non GMO) 15%

Inert ingredients:

Water, Soapbark, Isopropyl

Alcohol, Sodium Chloride,

Magnesium Sulfate 70%

This product contains only ingredients listed under FIFRA 25 (b) minimum risk products list & 4 (a) list Minimum risk inert ingredients and is exempt from EPA registration.
