

Mighty Wash®

Mighty Wash is a new revolutionary way to solve your plant problems.

Mighty Wash is a ready-to-use proprietary formula. It may be used throughout the grow and flower cycle.

READY TO USE
DO NOT DILUTE

SHAKE WELL

DIRECTIONS FOR USE: Spray **Mighty Wash** on fruits, vegetables, foliage, and flowers. **Mighty Wash** may be used on indoor, outdoor and greenhouse plants. Pour **Mighty Wash** directly into spray bottle or atomizer (do not dilute). Saturate top and bottom of leaves (entire plant) in order to achieve best results. If necessary spray every 3 - 5 days or until problem has stopped. Note: only one application may be necessary. Don't spray in direct sunlight (i.e. spray with lights off). It is effective throughout the grow and flower cycle. Use **Power Wash** after **Mighty Wash** to remove residual and increase results. Do not apply in temperatures above 90° F. or below 35° F. Only use as directed.

PM Wash

PM Wash is a new revolutionary way to solve your plant problems.

PM Wash is a ready-to-use proprietary formula. **PM Wash** is designed to work on plants subject to humid environments.

READY TO USE
DO NOT DILUTE

DIRECTIONS FOR USE: **PM Wash** may be used on fruits, vegetables, foliage, and flowers. Pour **PM Wash** directly into spray bottle or atomizer (do not dilute). Saturate top and bottom of leaves (entire plant) in order to achieve best results. It is effective throughout the grow and flower cycle (even during harvest). We recommend using **PM Wash** during the warmest, low humidity time of day (i.e. lights on). Use only as directed. Note: **PM Wash works especially well when used while harvesting!**

Power Wash

Many other plant sprays leave a residual layer on the plant. This residual layer can inhibit plant health. **Power Wash** is a ready-to-use proprietary formula. It is effective throughout the grow and flower cycle up to and including the day of harvest.

READY TO USE
DO NOT DILUTE

DIRECTIONS FOR USE: **Power Wash** is designed to wash away all residue left behind from other sprays. Pour **Power Wash** directly into spray bottle or atomizer (do not dilute). Spray all areas where residual from other foliar applications is present (we recommend full saturation). Spray **Power Wash** 1 - 3 days after **Mighty Wash** to increase results, promoting clean healthy plants and product. Do not spray in direct sunlight (i.e. spray with lights off). Apply as often as needed, **including the day of harvest**. Only use as directed.
