

Leviton LED Dimmers & LED Bulb Compatibility Test Results

As of June 2016

Testing and Compatibility

Leviton has an ongoing program testing LED bulbs for compatibility with our universal dimmers. The test program includes measurement of dimming range and testing for any abnormal flickering or fluttering.

Bulbs are tested in differing quantities of up to eight as the performance can vary based on the number of bulbs being dimmed. The ratings shown are based on an average of readings obtained and represent a reasonable expectation of performance.

In order to obtain consistence performance, it is recommended that when using multiple bulbs, they should be of the same model and wattage. Using combinations of different bulbs can result in varied dimming levels, color variation and potentially other undesired effects. Updated listings can be viewed at www.leviton.com/universal.

Understanding the Test Results

This compatibility list has been designed to help you determine which dimmable LED bulbs that have been tested and approved as compatible with the Leviton's Universal and Electronic Low Voltage Dimmers.

Minimum Brightness Level

The lower this percentage, the better the dimming range

Performance

This is how the dimmer performs with the bulb listed.

Better: Bulbs will dim, flickering may be present but not significant and diminishes with manual adjustment of slide

Best: Starts at low end, dimming range similar to incandescent, no observable flickering

If a rating for a particular bulb/dimmer combination is not provided, it could indicate inconsistent results or test results not available at this time. As additional test results for newer bulbs and dimmers are obtained, the compatibility chart will be updated.
