

Emergency Rechargeable Lantern With Flashlight 2pk – DLG2-972LS

Product Description

It is a portable utility light that can last up to six hours on a full charge. You can also set it to single high-beam mode for use as a very bright LED flashlight for up to 35 hours on a full charge of the battery.

Just plug it in with the included AC adapter and leave it. The light turns on automatically in the event of power loss, making it a must-have item for household safety and security.

The DL-972LS is more than just for emergencies. The light is perfect for camping, boating, mechanic work, or any other time when you need extra light. The super-efficient LEDs provide a brightness of 180 lumens—perfect for all of your indoor and outdoor tasks.

The Gama Sonic DL-972LS is far brighter than a standard flashlight but still has a convenient carrying handle for easy portability and a manual on/off switch so that you can use the light as needed.

This utility light also has a backup compartment for three standard AA batteries so that you can keep using the light in situations when you aren't able to recharge the internal battery.

For the energy conscious, you can rest easy that leaving the AC adapter plugged in won't run up your energy bill. It includes overcharge protection to stop drawing power when the light's battery is full.

For worldwide travelers, the adapter can handle up to a 230-volt input, meaning you can take the light with you on trips outside the US (Prong adapters not included).
