

# The Power **VEG** T5 Advantage

**MADE IN THE USA**

**EYE** HORTILUX<sup>®</sup>  
only the sun can do it better

Have you ever seen a spectral distribution for a T5 grow bulb? Most likely you have not. That's because what is currently available on the market is all the same. From brand to brand they have nothing unique or different to offer. The only real difference is their Kelvin Temperature and, contrary to popular belief, Kelvin Temperature does not affect plant growth in any way whatsoever.

PowerVEG is different. Not only does it produce a well balanced spectrum for your plants, it also provides UVA and UVB. UV is an essential component of the spectrum that produces stronger, healthier plants, allowing them to produce higher quality fruits and flowers. The sooner you introduce UV to your plants, the better your end product. No other T5 bulb on the market produces a spectrum with this quality or UV of any kind.

## Why PowerVEG is like no other T5

- First and only T5 to incorporate full spectrums of UVA & UVB (UVA = 315nm – 400nm ; UVB = 280nm – 315nm)
- Exclusive chemistry produces UVA & UVB spectrum
- The only T5 grow lamp Made in the USA

## What PowerVEG does for plants

- Promotes extreme photosynthesis for faster growth
- Creates a stronger root system
- UV light allows for easy transition from indoor veg to outdoor flowering
- Creates faster producing yields, vivid colors, more flowering and better tasting crops
- UV light helps develop stronger, healthier plants
