

Hippo Strip to Strip Tape Light Connectors Instructions

1. Ensure your section of LED light strip is 10 mm wide LED strip and has 4 contacts. Make sure all the contacts are clean.
2. Insert the LED light strip into clasp side. Set the 4 contacts of led strip sitting ON the 2 pins of clasp. Close the clasp down tightly. The sharp grooves should pierce up through the bottom of the strip and through the copper pads, making for a solid connection.

3. Validate installation is complete.

No need to peel off nano parylene coating on waterproof strips!

IP65 rating with existing waterproof tape light will not be maintained after connection.
