VT Series

Description:
The VT Series fixtures are usually used in environments which require water-proof, dust-proof lighting. They are widely used in parking garages, food manufacturing plants, cold storage, and other indoor spaces. The VT Series fixtures can be ceiling mounted or suspension mounted. Their body is constructed of eco-friendly polycarbonate which is stable in many varied environments. Energy savings of 70% or higher are realized with 135 lumens per watt efficient LED's. With an optional built-in microwave sensor, beautiful appearance, and convenient installation, these VT Series fixtures are excellent choices for many varied applications. Built with intelligent and durable construction features, high quality LED's, and an iron encased power supply, these VT Series fixtures boast a 50,000 hour rated lifetime.

Features:
1. The LED panel is secured to the fixture housing with shock-proof, easily operated buckles which are held in place with vibration-proof metal elevations.
2. Internal wiring connections are screwless, featuring tool-free press-type wiring.
3. The metal casing of the power supply effectively conducts heat from the internal driver components thereby cooling them and maintaining the long driver lifetime.
4. The milky white lens is highly transmissive providing uniform, glare-free illumination.
5. Metal clips hold the lens captive facilitating installation.
6. Features an installed plastic PG13.5 waterproof cable connection and second loose PG13.5 waterproof cable connection if through wiring of multiple fixtures is desired. PG13.5 waterproof cable connections are designed to be used with 6-10 millimeter diameter electrical cables.
7. The polycarbonate housing is lightweight and suitable for ceiling and suspension mounting.
8. The polycarbonate housing boasts IK08 impact resistance.
9. VT Series fixtures boast a -4 to 113 degree Fahrenheit operating temperature range while providing slight grade corrosion protection.

Sensor function introduction

VT Sensor Series fixtures include a microwave sensor to detect moving objects through the emission and reception of high-frequency microwaves in conformance with the doppler frequency shift principle and the ISM 5.8Hz radio band. The detection signal can penetrate plastic, glass, wood panels, and other thin non-metallic objects. Boasting a long detection distance and wide detection angle, the sensor will detect any moving object without being affected by environmental noise, temperature, nor humidity.

Light output increases to 100% and remains at that level for 3 minutes (or some other selectable “holding” period) whenever a moving object is detected.
If a moving object is not detected after the "holding" period expires, light output decreases to 30% (or some other selectable level) and remains at that level until additional movement is detected. If desired, a "standby" period can be selected.

If a moving object is not detected after the selected "standby" period expires, the light will turn off.

**Sensor function setting**

The detection range, holding time, standby cycle, standby brightness, and the sensor's light function in response to ambient light levels can be set with dip switches on the sensor if there's a desire to move away from the default settings.
Detection range
The detection range can be set to 25, 50, 75, or 100%. The factory default setting is 100%.

Holding time
When a moving object is not detected, the fixture will remain at 100% light output for 5 seconds, 30 seconds, 90 seconds, 3 minutes, 20 minutes, or it will always stay at 100% light output. The factory default setting is 3 minutes.

Standby cycle
When a moving object is not detected and the holding time has expired, the light output will decrease to a lower level. The light will turn off or remain at a lower “standby brightness” for 5 seconds, 5 minutes, 10 minutes, 30 minutes, 1 hour, or it will remain at the lower “standby brightness” until movement is detected once again. The factory default setting will maintain the lower “standby brightness” until movement is detected once again.

Standby brightness
When a moving object is not detected and the holding time has expired, the light output will decrease to 10, 20, 30, or 50%. The factory default setting is 30%.

Light sensor
The light sensor detects ambient light levels surrounding the fixture. The sensor can be set to turn on the light whenever motion is detected regardless of the ambient light levels, or it can be set to only turn on the light when motion is detected and ambient light levels are less than 5 lux, 15 lux, 30 lux, 50 lux, 100 lux, or 150 lux. Please note: The light sensor will still detect ambient light levels even when there is no light coming from the fixture. The factory default setting ensures the light will turn on whenever motion is detected regardless of the ambient light levels.

Main application:
VT Series fixtures can be used in warehouses, parking garages, shopping malls, food manufacturing, cold storage, mass transit, underground passage, and many other applications.
Dimension (Unit: mm):

- 20W/30W: 655mm/25.79"
- 30W/40W/50W/60W: 1285mm/49.80"
- 85mm/3.35"
- 115mm/4.53"

Installation requirement:

1. Turn power off before installation.
2. Release the metal clips securing the milky white lens to the fixture housing. The lens will hang loose, but it will not fall.
3. Turn the interior grey plastic buckles 90 degrees to free the LED panel from the fixture housing. Since the LED panel is secured to the fixture housing with anti-dropping devices, it will not fall while facilitating easy wiring connections on the back side of the LED panel.
4. Feed the customer-supplied 6-10 millimeter diameter electrical cable through the PG13.5 waterproof cable connection, and insert the individual conductors into the appropriate LED driver ports.
5. Reassemble the LED panel onto the fixture housing turning the grey plastic buckles 90 degrees.
6. Reassemble the milky white lens to the fixture housing securing the metal clips.
7. If the VT Series fixture will be surface mounted, drill four each 6 millimeter holes into the installation surface as presented in Installation Figure A. Then secure the ceiling brackets to the installation surface with the provided plastic anchors and self-tapping screws. Then snap the fixture housing into the ceiling brackets.
8. If the VT Series fixture will be suspended from the ceiling with the optional suspension kit cables (part number LEDF-TP020AWA2101A), drill two each 6 millimeter holes into the installation surface as presented in Installation Figure B. Then secure the cables to the installation surface with the provided plastic anchors and self-tapping screws. Then secure the ceiling brackets to the cable wire locks using the provided nuts, and snap the fixture housing into the ceiling brackets. Finally adjust the cable lengths to the desired suspension depth.
**Notice:**

1. Before installing this fixture, please ensure the environment where you intend to install the fixture conforms to the product specifications. Since this fixture provides slight grade corrosion protection, it cannot be used in highly corrosive environments. Contact 1000Bulbs.com if you have special requirements.

2. Please confirm the input voltage and frequency conforms to the product specifications.

3. Professional installation is required, since dangerous 100-277V connections will be made.

4. Do not install this fixture if it was received with damage to the internal electrical conductors or the fixture body.

5. Do not allow water into the fixture body, within the milky white lens, nor onto the LED panel during installation.

6. Ensure good contact of the electrical conductors into the driver ports.
